

Job Title: Laboratory Analyst

Department: Production & Quality

Duty Station: Jibu Uganda

Job Level: Mid-level

Reports To: Production & Quality Manager

Type: Full Time

Job Purpose:

The Lab Analyst will manage the operation of the JibuCo laboratory including planning and supporting sampling and testing programs for all Jibu country franchises. The role requires hands-on involvement, persistence and adaptability to respond to the challenges and needs that arise day to day in a timely manner.

Duties & Responsibilities:

- Perform scheduled sampling and testing of raw water and final products from all Jibu franchises in collaboration with the technicians
- Conduct continuous expansion of Jibu laboratory testing capacities and ensure equipment, tools, and reagents are available, sufficient, and calibrated where applicable required for reliable testing
- Implement all necessary best practices in the lab to ensure the lab environment is conducive for safe and reliable testing and coordinate regular testing with external labs for cross-referencing purposes
- Support root cause analysis and corrective actions activities in the event of nonconformity
- Coordinate compliance activities for lab testing requirements stipulated in standards during franchise product or systems certification processes
- Support technicians in anticipating non-compliance issues from franchises based on lab report history and initiate maintenance or repair activities to preempt product failure
- Conduct regular field visits to franchises to acquire information on quality conditions of production and provide proposals for development as well as to train operators on water quality and lab testing
- Prepare and distribute laboratory reports to keep management, technicians, and franchises informed on the performance of Jibu products
- Ensure monthly laboratory targets are met and use agreed-upon KPIs to track performance

Education/ Qualifications

- Minimum of 3 years' experience working in a laboratory
- Must be experienced in both chemistry and microbiology laboratory work
- Experience working with ISO 17205 laboratory standards is a plus
- Able to build and maintain record management systems while ensuring focus on precision and detail
- A proven track record of working in a team and being proactive in taking immediate corrective action
- Knowledge of country and international regulatory requirements
- Experience in and ability to organize and improve laboratory practices
- Sufficient computer knowledge to record test results, produce reports, and document procedure manuals
